Step by Step: Moving a Deployed Test

A test can only be deployed in one content area at a time. If you want to change deployment locations, you can move it to another content area or add a link to the test located in another content area. These instructions address moving a test from one content page to another.

1. Go to the Content Area where your test is located.

Click the test’s action link and select Move on the drop down-list.

2. On the Move page, under Destination, click the Browse button to select the new location.

3. A pop-up window will display with a list of course folders. Click the folder for the new location.

4. The new location will appear in the Destination field.

Click the Submit button.
